

Pupil Voice: Bright Futures at LDA

Event: 'Make it Work' Robot Challenge
Date: November 2018
Venue: Hugh Baird College

This experience showed me the importance of robotics and STEM in other job fields. I have plans to use the skills I learned especially how I had to learn from my mistakes when building the robot.

It was a joyful experience that was fun and educational.

It was a great experience that promoted teamwork and brought out the competitive spirit in all of us.

The robotics challenge provided opportunities that are not regularly available in school such as real robotic engineering.

It really helped me to think of solutions to improve and fix the robot after a problem occurred.

I learnt how to connect wires to operate a motor to make it active. It proved how complicated it is to make a robot and manage to make it move and rotate the

The robotics trip has made me consider a career path in engineering and other STEM career paths.

It was an amazing experience. It showed me how hard engineers work but how rewarding it can be. It was so interesting to see different skills being applied to build a robot.
