

Pupil Voice: Bright Futures at LDA

Event: Shaping Futures University Visits

Date: December 2018

Venue: University of Liverpool

The visit made me realise that I can combine my study of languages with other areas of interest. There's no reason why I can't pursue a career in the fashion industry in France.

We learned how maths is used in everyday skills as well as learning about careers for the future.

I was introduced to Trading as a career - I had never heard of it before and now I know how studying maths can open the door to such opportunities.

It really opened my eyes to the infinite possibilities the study of maths can provide.

I always knew I wanted to study maths when I leave school, what I didn't know was how many different career opportunities it could lead to.

I was surprised at how many different careers there are just in the engineering sector.

We learned so much about the economy and how the study of statistics is essential in so many areas.
